

Enterprise Editions *Local Networking*

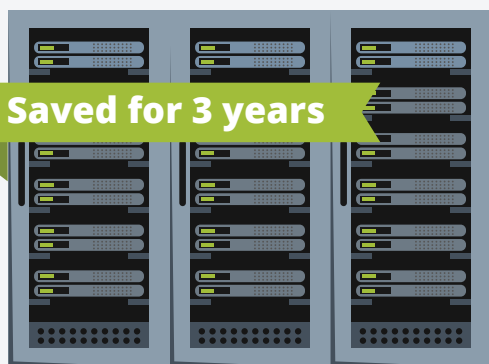

Ideal for practices with one location

Store your data on a local drive

Option to back up data to TaxAct's secure servers

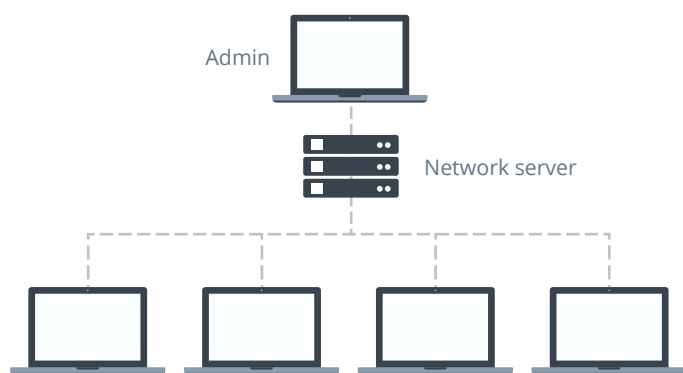

Saved for 3 years

How It Works With Multiple Users

Designate one computer/user as the administrator.

Administrator designates the shared location that all computers can access.

Administrator emails invitations to users to grant them access. Then, each user creates a TaxAct Account.

TaxAct installed on each computer. Each user signs in with their TaxAct Account credentials.

Preparers check client returns out and in via **Checkout Manager**

Preparer checks out a return

The return is now locked for other users

Preparer checks the return back in, which unlocks the return
